

**Ammann Grid and Knot Structure  
of a Quasiperiodic Girih Pattern**

**by Uli Gaenshirt**

**Bridges 2024 Conference**

## Historical Girih pattern

Internal angles are  
multiples of 36 degrees

# Admissible and forbidden transformations controlled by the quasiperiodic succession algorithm

Each rhombus tiling which is generated by the succession algorithm consists on cartwheels nested inside each other with a start rhombus  $R_0$  in the center of  $C_1$ .

Fulfillment of:  
 Matching rules: ✓  
 Succession rule: ✓

Figure A(a)

Therefore  $R_0$  cannot belong to a rhombus star as shown below.

Fulfillment of:  
 Matching rules: ✓  
 Succession rule: ✗
