IMAGINARY 2008-2014

IMAGINARY started in 2008 as an interactive travelling exhibition that presents visualisations, interactive installations, virtual worlds, 3D-objects and their mathematical background in an attractive and understandable way. Over the last years it has developed into an open source organization including a platform (www.imaginary.org) and a network for interactive and participative math communication.

The aim of the platform “IMAGINARY – open mathematics” is to provide a space for the presentation and development of math exhibitions. All contents of IMAGINARY are made available to a broad audience under a free licence and can thus be reproduced and used for individual exhibitions and events. Moreover, the platform provides an opportunity for everyone interested to contribute with their own material and serves as a hub for exchange of ideas in the field of math communication, a field that has seen many advances in the last years. The target group of the platform includes museums, universities and schools. For schools, a special IMAGINARY package has been designed to fit to the requirements and wishes of the students.

The platform currently hosts two exhibitions: the original exhibition “IMAGINARY – through the eyes of mathematics” that was the starting point for the whole project, and a second exhibition called “Mathematics of Planet Earth” that was organised for the worldwide initiative “Mathematics of Planet Earth”.

“IMAGINARY – through the eyes of mathematics” was designed by the Mathematisches Forschungsinstitut Oberwolfach (MFO) and was supported from 2008 to 2009 by the German Federal Ministry for Education and Research (BMBF). From 2011 to 2016 IMAGINARY is supported by the Klaus Tschira Stiftung. The exhibition has visited more than 125 cities in 29 countries and there are even some permanent installations for example in the Deutsches Museum in Munich and in the MoMath in New York. The didactical and aesthetic concept inspires the visitors for mathematics and sets out to evoke interest and curiosity for the theoretical background: by offering visuell impressions, live-interactions as well as guided tours and individual assistance on site.

A new part of the IMAGINARY project shares modern mathematical research with a broader public. As for instance by so called “Snapshots” (short texts) written by participants of the scientific program of the MFO. The IMAGINARY platform will be extended and translated in further languages. Moreover, an international network is being created to connect math communicators.

Awards

15.11.2013
 23.09.2009

„Medienpreis Mathematik 2013“ by DMV
 Award „Place in the Land of Ideas 2009“ by Deutsche Bank under the patronage of the federal president of Germany.

Actions and Projects

The exhibition is accompanied by numerous projects in the field of media and didactics. Especially noteworthy are the IMAGINARY-Entdeckerbox, an open source package with 25 interactive mathematical contents for school, and numerous math & arts competitions amongst others in collaboration with Zeit Online, Spektrum der Wissenschaft and media in Austria, France and Greece. IMAGINARY was presented to an international audience via talks and workshops in more than 15 countries.

Numbers of Visitors and Downloads

More than 1 million individuals visited IMAGINARY exhibitions, among them over 2000 school classes, which received free guided tours. Additionally several hundred people are visiting the permanent exhibits in the museums every day. The IMAGINARY programs were downloaded more than 500 000 times, the background articles approx. 300 000 times.

Echo in the Media and Publications

Numerous articles and reports on the individual exhibitions and events were published in print media, the internet, radio and television in Germany and abroad. Among them are articles in newspapers as Die Zeit, Süddeutsche Zeitung, Spiegel Online or BILD-Zeitung and many radio and TV reports for example in RBB, 3SAT/ZDF/WDR or Antena 3. Since 2011 several articles on IMAGINARY have been published, among them in the DMV Mitteilungen, in "Raising Awareness in Mathematics" (Springer Book 2012) and the VisMath Book (Hungary 2012).

This beautiful exhibition is very lively because of the excellently guided tour.

Math makes you happy.

Excellent, in particular the fact that the software can be used in school

Fantastic! Great guidance!

An amazing exhibition. I have spent a lot of time here and I got to know many beautiful things.

This should happen more often, actually this should be a permanent exhibition.

This exhibition is wonderful and beautiful.

The strange world of mathematics is not easy to understand. But here, one gets closer to it.

I don't like to go to a museum, with the exception of this one.

We came again because it was so fascinating!

Perhaps I should have studied mathematics however...

Simply marvellous, the software is cool!

This is fascinating – I wish I would have experienced this in school ;)

We are just lost for words!

Thanks for the good guidance.

This gives a clear proof for the beauty of mathematics!
