

# FLY FASTER? FLY SHORTER!

## SINUSOIDAL

This chart has a curious form and takes its name from the shape of meridians: they are arcs of a mathematical function called sinusoid. In certain areas of the map, the shape of the aircraft is very deformed and this makes it difficult to control the plane. Unlike many other charts, poles are points.

This map has a feature in common with one of the others in the game: can you figure it out which property is by looking at the behaviour of the plane?
